Information About New Server Software

November 1994

For Sales Personnel Only

Apple RAID Software

Product Description

Apple® RAID Software version 1.0.1 provides RAID (Redundant Array of Independent Disks) technology to Apple's PowerPC™ processor—

- **Enhanced performance.** Data striping enables the server to store successive units of data across multiple hard disks. This procedure allows a collection of disks to store larger amounts of data. The data is stored in parallel on several hard disks, potentially increasing performance for applications that can benefit from faster data transfer rates. Striping is most likely to be utilized
